Customer benefits

**Smooth operation**

Good water separability of the highly refined base stocks and inhibitor system ensure rapid settling of harmful water accumulated from condensation. The non-silicone foam inhibitor allows rapid release of entrained air while minimizing foam formation, enabling reliable operation of sensitive hydraulic control devices.

**Resists degradation**

Good oxidation stability provided by the multi-component inhibitor system resists oil breakdown during exposure to high temperature conditions.

**Potential maintenance and downtime savings**

The highly refined base stocks and multi-component oxidation inhibitor system resist the formation of harmful sludge and varnish deposits. The rust inhibitor protects components against corrosion.

**Potential inventory savings**

The rust and oxidation inhibited formulation has multipurpose capability in a wide range of industrial applications for which this type of product is recommended, helping to simplify oil inventories and reduce the possibility of using the wrong lubricant.

Applications

Rotary Vacuum Pump Oil 68 is suitable for use in the following applications

- Rotary vacuum pumps used in the dairy farm milking machine applications.
  - In extremely cold weather conditions, Caltex Regal R&O 46 may be required due to better fluidity at low temperatures.
- Other types of vacuum pumps where the viscosity and lubricant type are suitable.
- General oil-can lubrication of farm machinery.

*NOTE*: Rotary Vacuum Pump Oil is not suitable for food grade applications and should not be permitted to come in contact with milk i.e. no incidental food contact.

Product features:

- Rotary Vacuum Pump Oil is an Inhibited oil formulated from highly refined base stocks and rust, oxidation and foam inhibitors. Designed for lubricating all components of rotary vacuum pumps used in stationary or mobile milking machines.
